

EVO CAM II | High definition digital microscope | 0.8 µm 750x Magnification

The EVO Cam II is a high definition digital microscope that is robust, adaptable, and user-friendly. Excellent image quality and optical magnification up to 725x are provided by flexible configuration options; digital zoom extends this even further. You can select from a variety of precision objectives and wide-field lenses to create a setup that is ideal for your particular requirements. It is everything a microscope made by Vision Engineering should be.
